EDUCATION

California State University, Long Beach

Bachelor of Science in Computer Science, GPA: 3.6

Awards: CSULB President's Honor List.

Jan 2022 - Dec 2025

EXPERIENCE

Software Engineer Intern

May 2025 – Aug 2025

Amazon Web Services

Seattle, WA

- Designed and deployed an **AI-powered diagnostic agent** using **AWS Bedrock** and Claude 3.5 Sonnet that automates Root Cause Analysis for encryption incidents, reducing manual investigation time by **70%** across **500+** tickets.
- Built an event-driven automation pipeline integrating **AWS Lambda**, **Bedrock**, and **S3** that queries logs and **EC2** metadata in real-time, enabling the **AI agent** to diagnose and resolve incidents autonomously.
- Engineered an **AWS Lambda** filtering service that intelligently classifies and routes incidents to the AI agent, reducing false positive triggers by **40%** and efficiently processing **1,000+** daily events.
- Created automated evaluation pipelines using **LLM-as-a-Judge frameworks** to test AI diagnostic accuracy across multiple scenarios, **achieving 97%+ correctness** and establishing production readiness criteria.
- Automated **CI/CD** deployment pipeline using **AWS Batch**, **CloudFormation**, and **GitHub Actions** for continuous integration and testing, enabling reproducible deployments across **300+** test scenarios with full audit logging and rollback capabilities.
- Architected and productionized a scalable AI diagnostic system with automated evaluation, deployment, and monitoring workflows supporting multiple AWS infrastructure services.

Software Engineering Fellow

May 2024 – Aug 2024

Headstarter AI

Long Island City, NY

- Shipped 5 production AI applications to 1,000+ users using **Next.js**, **React**, and **OpenAI APIs**, including an AI customer support agent that handled **500+** conversations with **95%** resolution rate.
- Architected a **RAG-powered** recommendation system using **Pinecone vector database** and **LangChain**, achieving **85%** recommendation accuracy and reducing content discovery time by **40%** for users.
- Optimized data pipeline performance for customer analytics platform, reducing query latency from **3.2s** to **0.8s** through **PostgreSQL** indexing and **React virtualization**, enabling real-time analysis of **10,000+** records.

Instructional Student Assistant

Aug 2024 – Dec 2025

California State University, Long Beach

Long Beach, CA

- Led technical tutoring sessions for **50+ students** covering **data structures** (trees, graphs, heaps), **algorithms** (sorting, dynamic programming), and software development best practices in **Python** and **Java**.
- Created **automated grading scripts** and test harnesses using **Python** that reduced assignment evaluation time by **40%**, enabling faster feedback cycles for **150+** students per semester.

PROJECTS

BeachBank | Full-Stack Banking Application, Next.js & Fintech Integration

Nov 2025

- Built a production-grade banking platform with **Next.js 14**, **TypeScript**, and **Appwrite**, integrating **Plaid** and **Dwolla** APIs to support real-time multi-bank account management, balance syncing, and fund transfers.
- Engineered secure authentication and transaction workflows with end-to-end data integrity, handling concurrent multi-bank operations with real-time balance reconciliation.
- Designed and optimized **PostgreSQL** schema with efficient **SQL** queries for account, transaction, and user data, improving query performance for scalable financial data management.
- Deployed via **GitHub Actions** CI/CD pipeline to **Netlify**, enabling automated testing and zero-downtime production releases.

DevSecOps Project | Netflix Clone Deployment on AWS

Feb 2025

- Architected a full DevSecOps pipeline using **Jenkins**, **Docker**, **SonarQube**, and **Trivy**, catching and blocking **15+** critical vulnerabilities before they reached production.
- Automated Kubernetes deployments using **Helm** and **ArgoCD**, implementing a **GitOps** workflow that reduced deployment time and ensured infrastructure reproducibility across environments.
- Integrated **Prometheus** and **Grafana** monitoring stack to track system health, enabling proactive alerting and reducing mean time to resolution (**MTTR**) for production incidents.
- Achieved end-to-end deployment automation from code commit to production, demonstrating a security-first engineering mindset across the full software delivery lifecycle.

SKILLS

Programming Languages	: Python, Java, JavaScript/TypeScript, C++, C, C#, Golang, SQL, HTML, CSS
Frontend & Frameworks	: React, Node.js, Express.js, Next.js, Tailwind CSS, .NET, Kotlin, REST APIs
AI/ML & LLM	: AWS Bedrock (Claude, Titan Embeddings), LangChain, OpenAI, PyTorch, RAG Systems, Prompt Engineering
Cloud & DevOps	: AWS (EC2, S3, EKS, Lambda, CloudFormation, Batch), Linux, Docker, Kubernetes, Jenkins, GitHub Actions
Database & Tools	: MongoDB, PostgreSQL, Tableau, Power BI, Postman, Grafana, Git/GitHub, SonarQube, Trivy
